Mechanical Structures and Installations

Wiring Diagram

- SC connect with SPI spot light (TM1803)

- SC connect with one SPI pixel strips (WS2801)

- SC connect with SPI Digital light tube (TM1809)

- SC connect with SPI pixel strips (LED strip load over 8A)

Note:

1. If the SPI LED strip is a single-wire control method, the DATA and CLK signal line outputs of the controller are same, and one controller can connect 2 LED strips.
2. When the load exceeds 8A, the light strip needs to be powered by other power supplies.
Only DATA/CLK and GND cables are connected between the controller and the light strip.
3. The output power of the constant voltage power supply is at least 1.2 times that of the output load (light strip), otherwise the full power output of the load will easily cause the lights to flicker or shake automatically.

Match Remote Control

Match: Short press match key, immediately press on/off key of the remote.

Delete: Press and hold match key for 5s to delete all match, The light blinks 5 times means all matched remotes were deleted.
