

V1-CB

Casambi BT + RF Dimming LED Controller

Features

- Casambi BT + RF dimming LED controller with 1 channel, maximum 8A output.
- Casambi APP control, support on/off, brightness adjustment, group control, scene editing, startup state for power on and multiple power-down memory function settings.
- Match with RF 2.4G single-zone or multi-zone dimming remote controller optional.
- 4096 levels 0-100% dimming smoothly without any flash.
- 500Hz, 2KHz, 8KHz or 16KHz output PWM frequency selectable.
- Connect with external push switch to achieve on/off, and brightness 0-100% adjustment function.
- Overheat/reverse/short circuit protection.

Technical Parameters

Input and Output		Dimming Data		Safety and EMC	
Input voltage	12-48VDC	Input signal	Casambi + RF 2.4GHz + Push Switch	EN IEC 55015	EMC standard
Output voltage	12-48VDC			EN IEC 61547	
Output current	Max. 8A	Control distance	30m(Barrier-free space)	EN 61347-1/-2	Safety standard
Output power	96-384W	Dimming gray scale	4096 (2 ¹²)levels	EN 61347-1/-2	
Environment		Dimming range	0-100%	Radio equipment	ETSI EN 300 328
		Dimming curve	Linear/Logarithmic		ETSI EN 300 440
Operation temperature	Ta: -20°C ~ +55°C	PWM Frequency	500Hz/2KHz/8KHz/16KHz	Certification	CE RoHS
Case temperature (Max.)	Tc: +70°C	Warranty and Protection		Package	
IP rating	IP20				
		Warranty	5 years	Size	L60 x W60 x H40mm
		Protection	Reverse polarity, overheat short circuit	Gross weight	0.043kg

Mechanical Structures and Installations

Casambi

CE RoHS

Wiring Diagram

Wire preparation:

1. The wiring can be solid or stranded with a cross-sectional area of 0.5 to 2.0 mm². Conventional 1mm² can withstand 10A output current.
2. When wiring is installed, the terminals must be tightened. If they are not tightened, the contact point resistance will be too high and the terminals will easily burn due to heat when used at full load for a long time.

Note: The output power of a constant voltage power supply should be at least 1.2 times that of the output load (LED strip), otherwise the full power output of the load can easily cause automatic flickering or shaking of the light.

Installation Precautions:

1. The products shall not be stacked, the distance should be ≥ 20cm, so as not to affect lifespan of the products due to poor heat dissipation.
2. The product shall not be installed close to the switching power supply with an interval of ≥ 20cm to avoid radiation interference of switching power supply.
3. The installation height shall be ≥ 1m from the floor to avoid shortening the remote control distance due to too weak reception signal.
4. The products are not allowed to be close to or covered by metal objects, with an interval of ≥ 20cm to avoid signal attenuation and shorten remote distance.
5. Avoid installation at the corner of the wall or the corner of the beam, with an interval of ≥ 20cm to avoid signal interference.

Match with RF Remote Control

There are two ways to match/delete:

Use SET button

Match:

Short press SET button, enter the match state.
Immediately press on/off key (single zone remote) or zone key (multiple zone remote) of the remote,
The LED indicator fast flash means match is successful.

Delete:

Press and hold SET button for 10s to delete all match,
The LED indicator fast flash means all matched remotes were deleted.

Use Power Restart

Match:

Switch off the power, then switch on power, repeat again.
Immediately short press on/off key (single zone remote) or zone key (multiple zone remote) 3 times on the remote.
The output light flashes 3 times means match is successful.

Delete:

Switch off the power, then switch on power, repeat again.
Immediately short press on/off key (single zone remote) or zone key (multiple zone remote) 5 times on the remote.
The output light flashes 5 times means all matched remotes were deleted.

Push Switch Dimming

The push switch interface can be connected to push panel switch or push button for dimming.

- **Short press:** Turn the light on or off.
- **Double-click:** Switch between 10% and 100% brightness.
- **Long press (1-6s):** Continuously increase or decrease the brightness, long press again after each release, the brightness changes in the opposite direction.
- **Synchronize:** If multiple controllers are connected to the same self-reset switch, please long press for 10s first to synchronize all lights to 100% brightness. It is recommended that the number of controllers connected to the same push switch does not exceed 25, and the length of the connecting wire does not exceed 20m.

PWM Frequency Setting

Set the PWM frequency using DIP switch 1 and 2. The factory default PWM frequency is 2KHz. Higher PWM frequency, will cause lower output current, higher power noise, but more suitable for camera (No flickers for video).

PWM frequency and output current mapping:

PVM frequency U _{in} \ I _{out}	1 2		1 2		1 2		1 2	
	500Hz		2KHz		8KHz		16KHz	
12-24V	8A		8A		7A		6A	
36-48V	8A		8A		7A		5A	

Dimming Curve Setting

Set the dimming curve using DIP Switch 3. The factory default is logarithmic dimming.

Casambi APP Connection

Use Casambi APP for the first time

When devices are used for the first time, they need to be added to the network. A device can only be part of one network. All Casambi devices are normally supplied in an unpaired state.

- 1. Download the Casambi APP from the Apple APP Store or Google Play Store.
- 2. The device is powered on and automatically enter the config state.
- 3. The APP will search for all devices with casambi turned on within the Bluetooth range of the mobile device.
- 4. When a device is added to the network, it can be controlled by application.

Compatible System:
Android 4.4 and ios10.0 or above.

Casambi uses Bluetooth Mesh network technology and each Casambi device can also be used as a repeater for longer distances. The distance is highly dependent on the surroundings and obstacles such as walls and building materials.

Casambi APP user interface

Device Pairing:
Click “show nearby devices”, add the V1-DIM device to your network, and pairing will be successful.

Parameter Settings:
Click “PWM” to select PWM frequency: 500Hz, 2000Hz, 8000Hz, 16000Hz. Click “Dimming curve” to select Linear dimming or Logarithmic dimming (gamma 1.6).

Dimming:
Click the light fixture icon: Turn the light on or off. Long-press the light fixture icon: A brightness slider appears at the bottom of the screen. Touch the brightness slider to adjust the light level.

Mode Settings/Startup State for Power on Settings:
Double-click the light fixture icon to enter the settings interface. Long-press “Mode 1/2/3” to edit/clear/cancel mode settings. Click “Default Mode” to select the startup state for power on. Swipe left or right on the slider to set minimum/maximum brightness.

Group Control:
In the main interface, click “Group” in the upper left corner, select the fixture you want to group, and create a group. The main interface shows the new group, and then you can control the group.

Scene Setting:
Click “Add Scene” in the Scene Interface to add and edit scenes.
